This document is intended to help you troubleshoot problems with Wi-Fi Services.

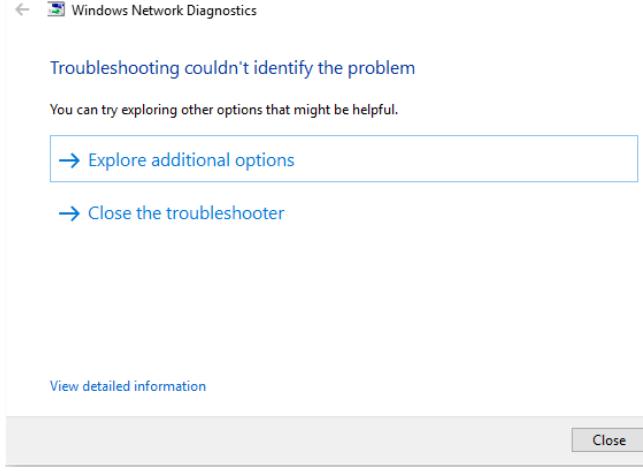

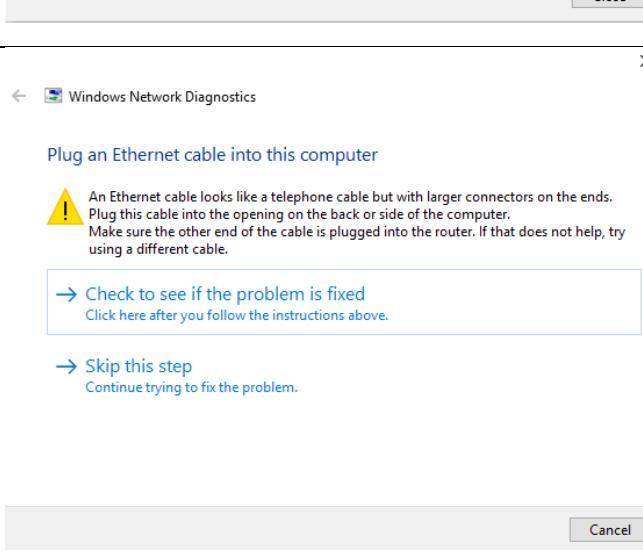

Restart/Power cycle your device:

- ❖ Try power cycling the device you are using (laptop / cell phone / tablet) power off and power on the device and try to reconnect device built-in troubleshooting for Windows:

Device Built In Trouble-Shooting for Windows:

- ❖ All windows computers have a built-in troubleshooting feature that can sometimes resolve internet problems. The following steps show how this is accomplished on a Windows PC.

How to Troubleshoot internet issues on your Windows Computer	
Step 1: Right Click on the Wi-Fi Icon at the bottom right side of your desktop home screen.	
Step 2: After right clicking on the Wi-Fi tab, select “Troubleshoot Problems” And your computer will begin the scan automatically.	

Step 3: <p>After the scan is complete, instructions will appear for you to follow. Please follow the steps by either exploring more options or closing the trouble-shooter.</p>	 A screenshot of the Windows Network Diagnostics troubleshooter. The main message says "Troubleshooting couldn't identify the problem. You can try exploring other options that might be helpful." It includes two buttons: "Explore additional options" and "Close the troubleshooter".
Step 4: <p>If you find that the troubleshooting does identify an issue, please attempt to correct it by following the instructions.</p>	 A screenshot of the Windows Network Diagnostics troubleshooter. The main message says "Plug an Ethernet cable into this computer. An Ethernet cable looks like a telephone cable but with larger connectors on the ends. Plug this cable into the opening on the back or side of the computer. Make sure the other end of the cable is plugged into the router. If that does not help, try using a different cable." It includes two buttons: "Check to see if the problem is fixed" and "Skip this step".
Step 5: <p>If you cannot fix the issue by following the steps, please relay any information gathered by the diagnostics and present them to your Support Representative.</p>	 The logo for COMU Networks, featuring the word "COMU" in a bold, black, sans-serif font with a blue square icon integrated into the letter "O". Below it, the word "NETWORKS" is written in a smaller, black, sans-serif font.

Device built-in troubleshooting for MAC:

- ❖ All MAC computers have a built-in troubleshooting feature that can sometimes resolve internet problems. The following steps show how this is accomplished on a MAC PC.

How to Troubleshoot internet issues on your MAC**Step 1:**

Open your Spotlight Search and type “Wireless Diagnostics”.

Select the application when it appears.

**Step 2:**

Run the Diagnostics, and follow any directions that your MAC directs you to.

**Step 3:**

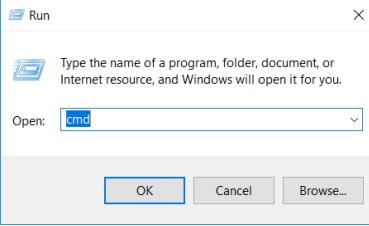

Please relay any information gathered here to your Support Representative.
